

PC Requirements for Agrinavia FIELD and Agrinavia MAP

General		
<p>If your current PC is too slow, it might be an idea to install additional RAM. However, additional RAM does not solve all problems, and we recommend that you consider upgrading to a more powerful PC. Agrinavia FIELD and MAP generally run at good speed on all computers that are fairly up-to-date. This could typically be a PC that is 1-3 years old at most. (There are exceptions, of course!)</p>		
Unit	Minimum Requirements	Comments
Operating system	Make sure to keep your Windows version updated with the latest service packs from Microsoft. Use the online Windows update feature.	The software can be installed on both the 32-bit and 64-bit versions of the operating systems.
Processor	Intel Pentium 4 Intel Pentium M	If you purchase a new PC today, the processor will typically be powerful enough for Agrinavia FIELD/MAP.
RAM	2 GB	Make sure that particularly PCs running Windows Vista are not low on RAM, as Vista consumes many resources in itself.
Hard disk	50-100 GB	Agrinavia FIELD and MAP need approx. 1 GB of space. Ortophoto for a couple of municipalities takes up 5-7 GB, for instance.
Graphics system	Middle range	Make sure the graphics card has ample memory. Preferably 256 MB RAM or more. Avoid graphics systems that share memory with the internal RAM.
CD/DVD USB etc.	CD burner	It is handy to have a CD/DVD burner or a USB memory stick to use for backups of your data. All new PCs have USB ports.
Antivirus software and Firewall	Subscription for updates via the internet and a hardware-based firewall.	Make sure your PC has a professional antivirus program from day 1. Cleaning a PC for virus is expensive. In addition, we recommend a hardware-based firewall.
Internet	512/128 Kbit. If you want the online facilities the requirements are: 5000/2000 kbit	Expected download time for Agrinavia FIELD 512/128 KB/s: 12 minutes. 4096/512 KB/s: 5 minutes.
