

Generelt

About Crop stocks.

Crop stocks are an extension of the **Stock management module in Agrinavia FIELD**. With the Crop stock any movement of yield feed or goods can be recorded. Crop Stock keep track of the harvested yields from field to stocks on different locations to buyer as well as stocks of feed, gravel used on the farm.

Crop stocks is access by menu:
Stock management > Crops > Stock

Keeping tracks of crop stocks on multiple farms

If you want to use same stock on multiple farms, the farms must belong to the same Card file and be in the same partnership.

It's not mandatory to use same stock if farms are in the same Partnership. Its voluntary. You can still have own stocks if you like but you have the possibility to use a common stock too.

Concepts in stock management

Crop stocks deals with the concepts **Stock¹**, **Location²**, **Registration³** (Total weight⁴, Empty weight⁵ (Tare) and Net weight⁶).

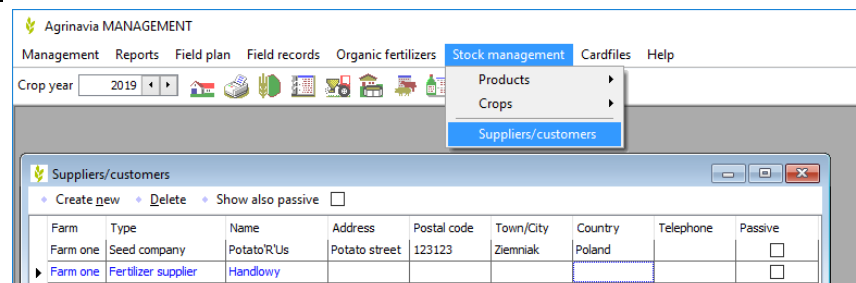

Suppliers /Customers

Information's on supplier / customer may be needed when you do registrations, weigh-in or sales.

Select the menu:

Stock management / Suppliers /Customers to create or edit trading partners.

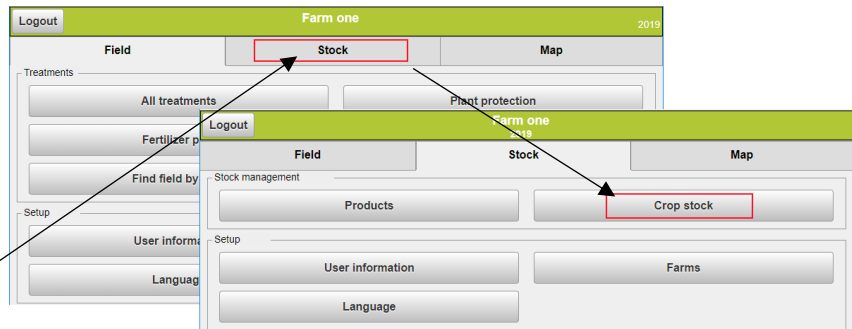

Access

Registration can be done using any mobile device and on PC.

System is very geared to registration is done using iPad, tablets or mobile phones as they always are at hand, while the main overview appears on PC.

Crop Stock can be accessed from main menu. Click on **Stock** and then **Crop Stock**

Calculate yields per field and transfer the yields to Fieldplan

On the tab **Stock Management/ Crop / Registration** you find a function to display / transfer yields from the Crop stock module.

Source	Receiver	Location	Type	Time	Total	Empty	Net	Unit	Analyses	Person etc.	Note
Field 7-0	Stock	Sugar Beets		25/10/2019 14:02	50000.00	0.00	50000.00	kg		0.00	Karsten Folmer
Field 7-0	Stock	Sugar Beets		25/09/2019 14:02	70000.00	0.00	70000.00	kg		0.00	Karsten Folmer
Field 14-0	Stock	Feed wheat		25/08/2019 14:14	39600.00	1450.00	38150.00	kg		14.11	Karsten Folmer

The dialogue only shows yields of main products.

The function opens a new dialog showing fields with yield transfers. For each field. The existing main product from Field plan is displayed with the yield registered in the storage module.

Selected	Farm	Field code	Cluster	Field name	Area	Type	Last crop	Crop	Yield stock	Unit	Yield field plan	Unit	Can transfer
<input checked="" type="checkbox"/>	Farm one	1-0			7.11	Main crop	Spring wheat	Spring oats, fc	5.27		5.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	2-0			4.91	Main crop	Potatoes, edli	Spring wheat	5.39		5.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	3-0			5.88	Main crop	Spring oats, fc	Potatoes, edli	42.09		40.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	4-0			17.97	Main crop	Spring barley	Winter wheat	7.34		7.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	5-0			56.00	Main crop	Winter wheat	Winter wheat	7.10		7.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	6-0			32.06	Main crop	Winter wheat	Winter wheat	7.04		7.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	7-0			1.99	Main crop	Winter wheat	Sugar beet	60.30		56.00		<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/>	Farm one	7-1			8.70	Main crop	Sugar beet	Spring barley	5.58		5.00		<input checked="" type="checkbox"/>

There is also a column that shows whether the yield can be transferred (unit group match).

NB! Average yield calculations and the ability to link yields back on every field demand that every registration is done with field information.

Transfer yields to field plan

Click the Transfer button at the bottom of the dialog to transfer the yields to the field plan / field sheet.

Selected fields can be transferred to the left side of the dialog.

The main product registrations are adjusted on the field sheet with the yield shown. Registration date and status are set to Done. If harvest was done over multiple days, Registration date are set to the earliest date.

Yields may be transferred again if needed.

Transfer yields to Field plan may also be done from the tag "Yields" on mobile. The calculated yields in every crop are shown. Click select to choose what field you like to update.

Stocks (Crop)

The Stock (Crop) belongs to a farm.

A stock will typically be a crop ex. "Feed barley" or perhaps a specified potato variety of a given quality "Melody (good)", but it can also be "wood chips" or "piglets feed". There is no limitation to it.

If several farms work in a partnership and one wants to know the amount of feed barley belonging to the individual farms, a stock must be created for each farm, eg. "Feed barley – Farm one" to which the harvested product is registered. Yet all harvested "Feed barley" may still be transported into the same silo (Location) at the same site, but the ownership is clarified.

We have year specific stocks, where harvest only is seen and recorded in the current harvest year, eg. "Malting barley 2019" and stock only exists until the crop is sold.

We have permanent stocks, eg. fodder where harvested crops are transported to and from every year, as its harvested and consumed. There is always some level in stock and a status of content before start of harvest year will be shown

If a stock is used over several years, eg. asphalt, tile, fodder silo etc. then mark it with a check mark.

The current inventory of a stock / crop is shown under **Stock Management / Crops / Stock**.

If you have stored your crop stocks in several locations, it is the sum of inventory stocks from all locations shown.

Please note that inventory must be recalculated (change tab) if the screen has been open for a long time and grain has been weighed on mobile in the meantime

An overview of Stock - Location associations is displayed in the **Location etc.** tab.

Place cursor on a stock and click **Attach location** to add a location.

A window opens where you can check which silos are used for the stock.

Only associated locations can be selected when registering on a PC.

Stock	Farm	Passive	Type	Name	Permanent stock	Inventory	Unit	Note

Location (place)

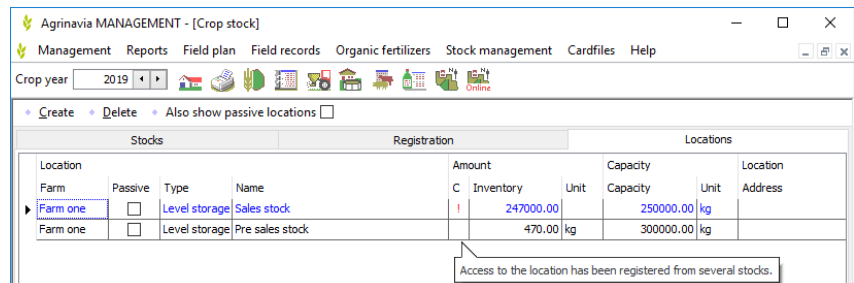

Location can be specified if you have several silos for storage and want to manage the distribution and storage.

In Agrinavia FIELD the current inventory at the location can always be monitored under the “locations” tab.

Do you use “locations”? so do it consistently both in weighing in and weighing out.

A Location is typically a silo or a level store with a specified capacity that can store crops from one or more stocks.

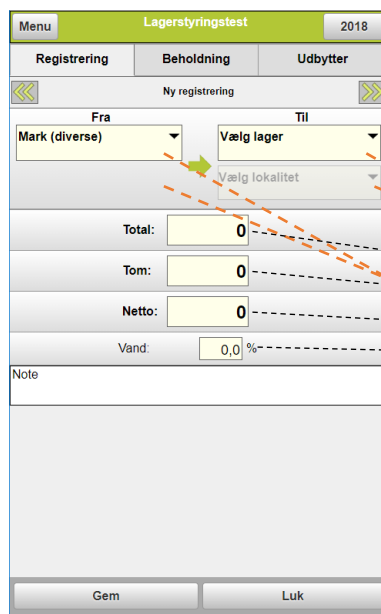

You can choose to send haulers to a given location in connection with pickup from a crop stock, or send the grain wagon to a location where there is room for the harvest.

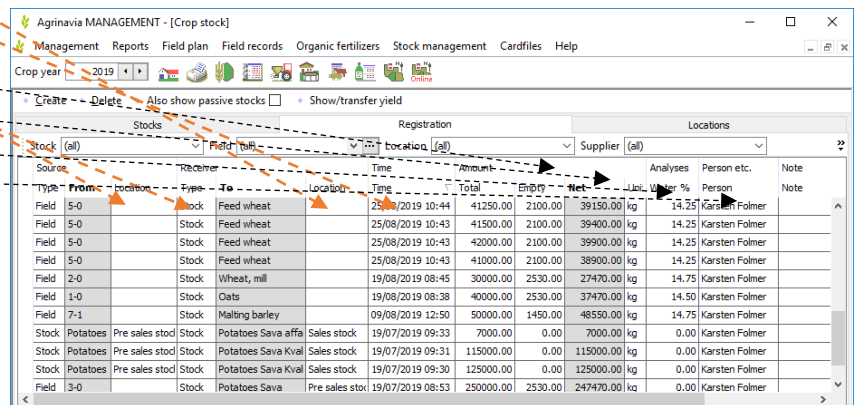

Location	Passive	Type	Name	Amount	Capacity	Unit	Location
				C Inventory	Capacity	Unit	Address
Farm one	<input type="checkbox"/>	Level storage	Sales stock	247000.00	250000.00	kg	
Farm one	<input type="checkbox"/>	Level storage	Pre sales stock	470.00	300000.00	kg	

As mentioned, it is not necessary to register location. Most people don't need it and will probably only use location if there is limited capacity in the different silos and there is a need to know where it is filled up and where it's possible to go with the harvest.

Registration

In the registration tab it is possible to see this year's registrations. I.e. Each time a tractor driver on the mobile register that a load has been run over the bridge weight, this registration will be visible on the list. It is possible to edit all entries in the screen, adjust comments and create new records or manually divide a registration in two over two fields if a load is specified with a distribution key (I.e. 60:40) for it.

Source	From location	Receiver	Type	To location	Time	Amount	Empty	Net	Unit	Analyses	Person etc.	Note
Field 5-0	Stock	Feed wheat	Stock	Feed wheat	25/08/2019 10:44	41250.00	2100.00	39150.00	kg	14.25	Karsten Folmer	
Field 5-0	Stock	Feed wheat	Stock	Feed wheat	25/08/2019 10:43	42000.00	2100.00	39900.00	kg	14.25	Karsten Folmer	
Field 5-0	Stock	Feed wheat	Stock	Feed wheat	25/08/2019 10:43	41000.00	2100.00	38900.00	kg	14.25	Karsten Folmer	
Field 2-0	Stock	Wheat, mill	Stock	Wheat, mill	19/08/2019 08:45	30000.00	2530.00	27470.00	kg	14.75	Karsten Folmer	
Field 1-0	Stock	Oats	Stock	Oats	19/08/2019 08:38	40000.00	2530.00	37470.00	kg	14.50	Karsten Folmer	
Field 7-1	Stock	Malting barley	Stock	Malting barley	09/08/2019 12:50	50000.00	1450.00	48550.00	kg	14.75	Karsten Folmer	
Stock Potatoes	Pre sales stock	Potatoes Sava affa	Sales stock	Potatoes Sava affa	19/07/2019 09:33	7000.00	0.00	7000.00	kg	0.00	Karsten Folmer	
Stock Potatoes	Pre sales stock	Potatoes Sava Kval	Sales stock	Potatoes Sava Kval	19/07/2019 09:31	115000.00	0.00	115000.00	kg	0.00	Karsten Folmer	
Stock Potatoes	Pre sales stock	Potatoes Sava Kval	Sales stock	Potatoes Sava Kval	19/07/2019 09:30	125000.00	0.00	125000.00	kg	0.00	Karsten Folmer	
Field 3-0	Stock	Potatoes Sava	Pre sales stock	Potatoes Sava	19/07/2019 08:53	250000.00	2530.00	247470.00	kg	0.00	Karsten Folmer	

If the stock is year specific registrations only will be visible in the related harvest year, and the stock will not be available next harvest year.

Inventory

At the bottom of all three tabs in crop stocks you will find the inventory tab, that will show you any movements in the harvest year. Here you can see access (in), departure (out), stock at beginning of harvest year and stock of all stocks available at the end of harvest year.

Periode 01-06-2017 - 30-06-2017

It's also possible to filter out movements in stocks within a given period.

Stock	Location	Unit	Start date	Start inventory	In	Out	End date	End inven...
Bobik	All	t	01/01/2019	0.00	5.00	0.00	31/12/2019	5.00
Feed wheat	All	kg	01/01/2019	0.00	754981.00	0.00	31/12/2019	754981.00
Malting barley	All	kg	-	0.00	48550.00	0.00	-	48550.00
Oats	All	kg	-	0.00	37470.00	0.00	-	37470.00
Potatoes Sava	All	kg	01/01/2019	0.00	247470.00	247000.00	31/12/2019	470.00
Potatoes Sava affald	All	kg	-	0.00	7000.00	0.00	-	7000.00
Potatoes Sava Kvalitet A	All	kg	-	0.00	125000.00	0.00	-	125000.00
Potatoes Sava Kvalitet B	All	kg	-	0.00	115000.00	0.00	-	115000.00

Data Source: Online (Developerserver) User: karsten.folmer@datalogisk.dk Farm: Farm one, Ny Polska tester

For permanent stocks, the start and end date will be January 1. and December 31. in the calendar year.

Be aware that calculations of inventory only look at date of registration and not harvest year. For permanent registration this mean any registration no matter what harvest year it is registered it will be retrieved if the date of registration is within the given period.

Summing up

At the bottom of all three tabs in crop stocks you also will find the Sum tab, that will show you access (in) and departure (ou) as well as difference in registrations to all stocks during the harvest year.

Stock	Unit	In	Out	Difference
Feed wheat	kg	754981.00	0.00	754981.00
Malting barley	kg	48550.00	0.00	48550.00
Oats	kg	37470.00	0.00	37470.00
Potatoes Sava	kg	247470.00	247000.00	470.00
Potatoes Sava affald	kg	7000.00	0.00	7000.00
Potatoes Sava Kvalitet A	kg	125000.00	0.00	125000.00
Potatoes Sava Kvalitet B	kg	115000.00	0.00	115000.00
Sugar Beets	kg	120000.00	0.00	120000.00
Wheat, mill	kg	27470.00	0.00	27470.00

Use and principles

It is totally free to the user to setup how detailed the user wants its inventory management to be. As a starting point, there is no reason to make things more difficult if the functionality is not utilized.

But from the harvested crops pass the bridge weight the first time and into the stock until it is driven away and sold, there will be differences. Therefore, there may also be a need to empty and reset stocks along the way.

It is totally free to the user to use permanent stocks to keep track of movements or whether he will create a new stock each year for each year's harvest.

Examples of registration

From Field to Stock:

New registration

From: 4-0 Winter wheat, fodder

To: Feed wheat

Select location

From Field to Stock with location:

New registration

From: 4-0 Winter wheat, fodder

To: Feed wheat

Silo 1

From Field to Stock placed at Agribusiness or Neighbor:

New registration

From: 7-1 Spring barley, malt

To: Malting barley

Located at Agribusiness

From stock to stock (intern movement between locations):

New registration

From: Potatoes Sava

To: Potatoes Sava Kvalitet A

Pre sales stock

Sales stock

From stock to agribusiness (sale):

New registration

From: Malting barley

To: Agribusiness

Silo 1

From Stock located at Agribusiness / Neighbor to agribusiness (sale):
