

## Always copy to subsequent crop years

If you have prepared a new field plan for next year but need to add some changes to last year, Agrinavia will ask if you want to copy these changes to all subsequent crop years.

It's now possible to set this to default so any update in earlier years will get effect in future crop years, so you don't have to confirm every time.

Relevant columns for this new feature is changes in Field code, Field name, Cluster id and all Changes in analyses.

## Disable feature

If you want to disable these settings click:
