

AGRINAVIA 

Agrinavia **MANAGEMENT**

The Agrinavia MANAGEMENT package consists of three programs

Agrinavia FIELD

– provides you with software to register all your activities in and outside the field, e.g. spraying, fertilizing, and seeding plans, stock control lists, Job Sheets, calculation of contributions and key figures. This means overview, documentation, and easy follow-up at all times.

The FIELD program is continuously updated with new modules, the latest being CropManager for easy precision farming. Working in CropManager, you create

application maps for spraying, fertilizing, and seeding based on satellite photos and biomass maps.

Agrinavia MAP

– enables you to draw, calculate and edit your field maps. You can add fields, divide fields, make outer zones for special treatments etc. All changes are done easily and with full flexibility. In Agrinavia MAP you save all your maps digitally in one and the same program, whether they are field, soil, drainage, or other maps.

You can use Agrinavia MAP as a stand-alone program or combine it with Agrinavia FIELD and/or Agrinavia MOBILE.

Agrinavia MOBILE

– is the app for mobile phone and tablet enabling you to enter and retrieve data when standing in the field or elsewhere.

Working on the spot saves time – when in doubt just check your mobile phone for planned treatments and other field data.

Also, you can use the GPS Observation module and register irregularities in the field. Then you have knowledge of the precise location and know where to return to.

Soil samples can also be logged on your mobile phone with the possibility to create a document listing the various analyses, you wish carried out. With the Agrinavia SOIL module samples, location, analyses, and documentation are gathered and saved in the same program.

This is big advantage when working with many and different field data.

Using the Agrinavia MOBILE app you have the possibility to create Job Sheets directly on mobile phone and also check them wherever you are.

You can use Agrinavia MOBILE as a stand-alone program or combine it with Agrinavia FIELD and/or Agrinavia MAP.
